

# ERP REQUIREMENTS SPECIFICATION

**For Fahrenheit Engineering**

**OITS DHAKA LIMITED**

Corporate Address: Avenue-11, Road-9/A, House-1152, DOHS, Mirpur Cantonment, Dhaka

## Requirements Specification Document

**Client:** Fahrenheit Engineering

**Industry:** VRF HVAC Services, Import, Distribution & Retail

**Project Type:** Full-scale ERP System

### 1. SYSTEM OVERVIEW

**Fahrenheit Engineering operates across three integrated business areas:**

- HVAC System Installation & Services (Project-based)
- Import & Commercial Operations (L/C, CnF, logistics)
- Spare Parts Distribution (Retail & Corporate Sales)

**The ERP system must support:**

- Project-based costing
- Inventory-linked service operations
- Commercial import lifecycle
- End-to-end financial integration
- Centralized business process management

### 2. CORE SYSTEM LOGIC

**Primary Workflow:**

**Key Principles:**

- Every service activity must be treated as a **Project**
- Every transaction must automatically post to **Accounts**
- All modules must be interconnected

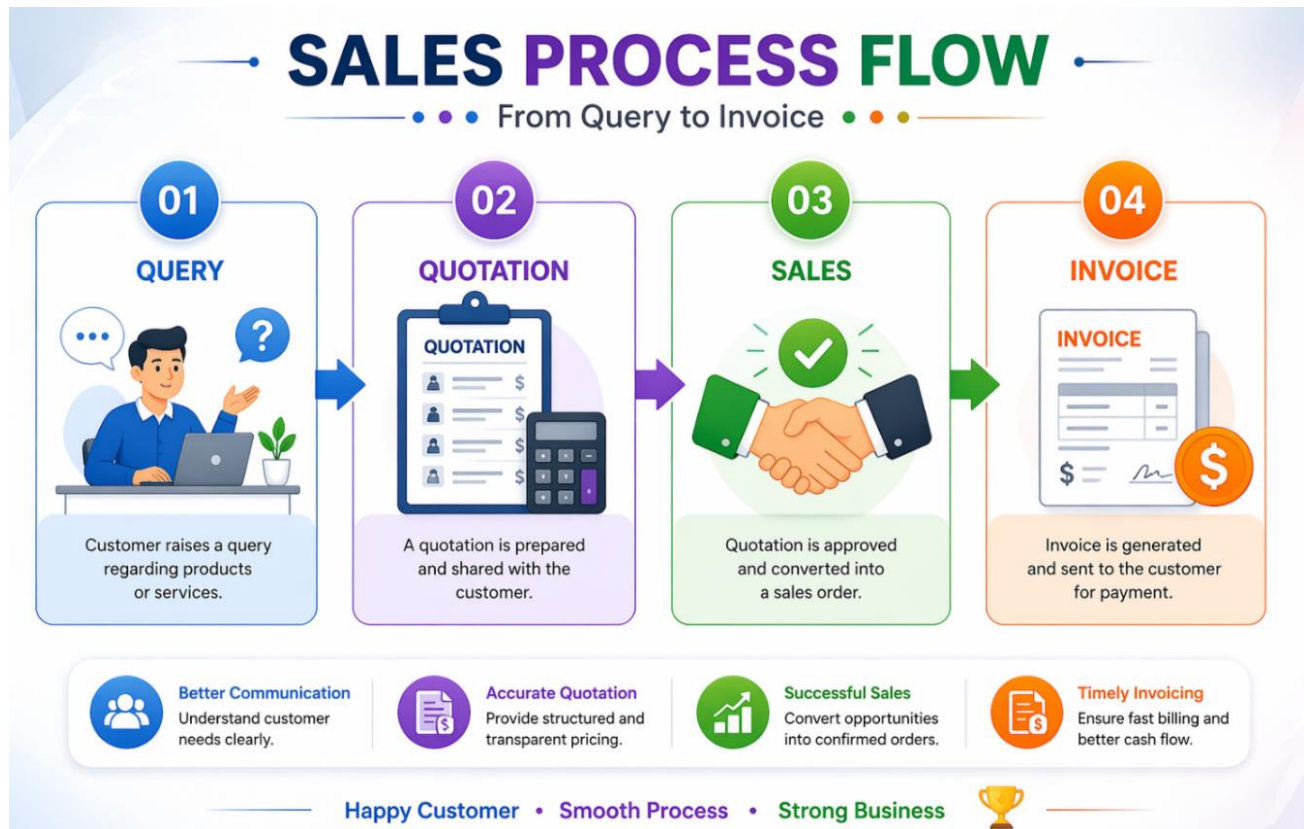

### 3. CRM & SERVICE MANAGEMENT MODULE

#### 3.1 Query Classification

All customer interactions must be recorded in CRM and classified as:

##### A. Product-Based Query

Flow:

## B. Service-Based Query

### 1. New Service

Flow:

Includes:

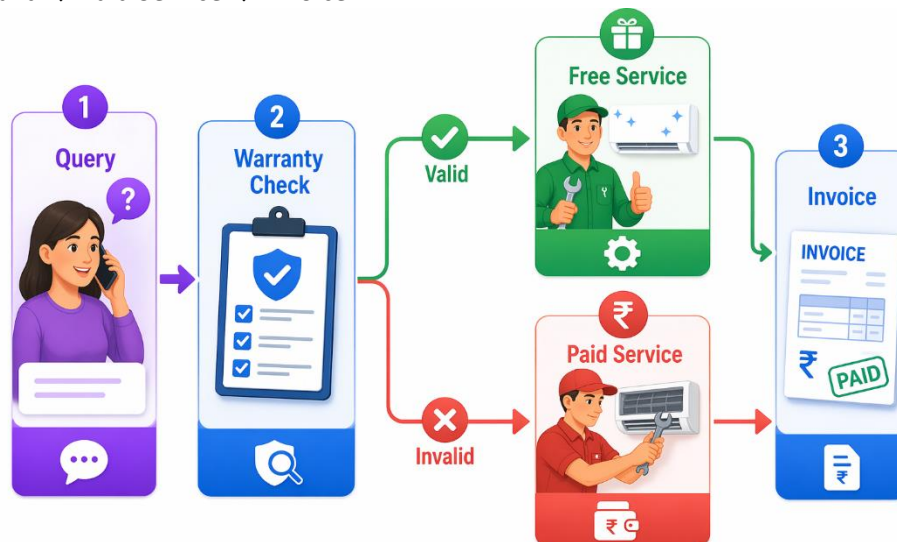

- Site inspection
- Assessment reporting
- Cost-based quotation generation

### 2. Existing Service (Warranty / Paid)

Flow:

Query → Warranty Check →

- If Valid → Free Service
- If Invalid → Paid Service → Invoice

System Requirements:

- Warranty tracking
- Automated billing decision

### 3. Maintenance Service (AMC)

Flow:

Includes:

- Periodic service contracts
- Scheduled maintenance visits

### 3.2 Mandatory Rule

- Every Query must convert into a Task
- Every Service must map to a Project

## 4. SALES & CRM MODULE

### 4.1 Sales Types

- **Retail Sales** – Standard pricing for individual customers
- **Corporate Sales** – Negotiated pricing for business clients
- **On-Demand Sales** – Custom or urgent requests with flexible pricing

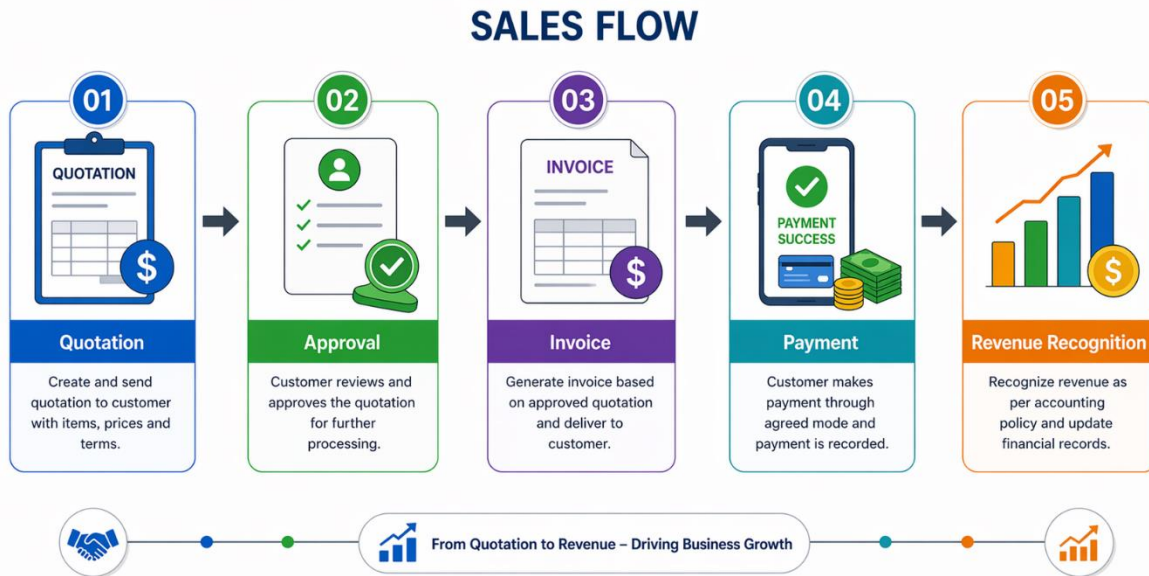

### 4.2 Pricing Logic

Product pricing may vary based on:

- Customer type
- Order quantity
- Negotiation or contract terms

### 4.3 Sales Flow

## 5. INVENTORY & SUPPLY CHAIN MODULE

### 5.1 Multi-Level Inventory Structure

- **Master Inventory** – Central warehouse
- **Sub Inventory** – Branches, project sites, or local storage

## 5.2 Inventory Workflow

Import / Purchase → Warehouse Entry (GRN) → Master Inventory →

- Sales
- Service Consumption
- Stock Transfer

## 5.3 Key Features

- Vendor & supplier management
- Purchase order management
- Multi-warehouse tracking
- Stock transfer
- Stock adjustment (damage/loss)
- FIFO / LIFO costing

## 5.4 Additional Requirements

### Demand Note System

- Product list
- Quantity required
- Purpose (project/sales)

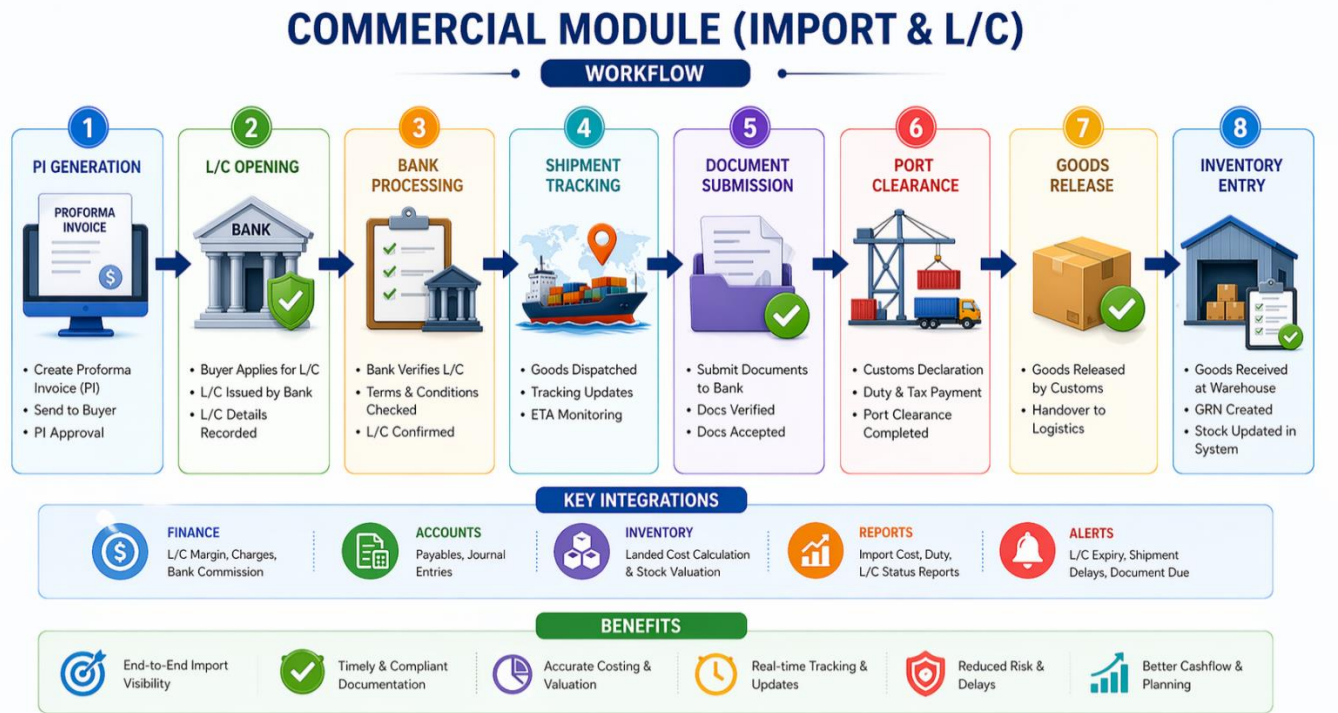

### Document management regarding import

- Import shipping document
- Must be stored and linked with import records

## 6. COMMERCIAL MODULE (IMPORT & L/C)

### 6.1 Workflow

PI Generation → L/C Opening → Bank Processing → Shipment Tracking →  
Document Submission → Port Clearance → Goods Release → Inventory Entry

### 6.2 Features

- Import handling (direct & third-party)
- L/C lifecycle management
- Bank and payment tracking
- Documentation management
- Port and goods release tracking

### 6.3 Financial Integration

- Landed cost calculation (product + freight + duty)
- Vendor payable tracking
- Cash flow forecasting

## 7. PROJECT-BASED COSTING (CRITICAL)

### 7.1 Core Principle

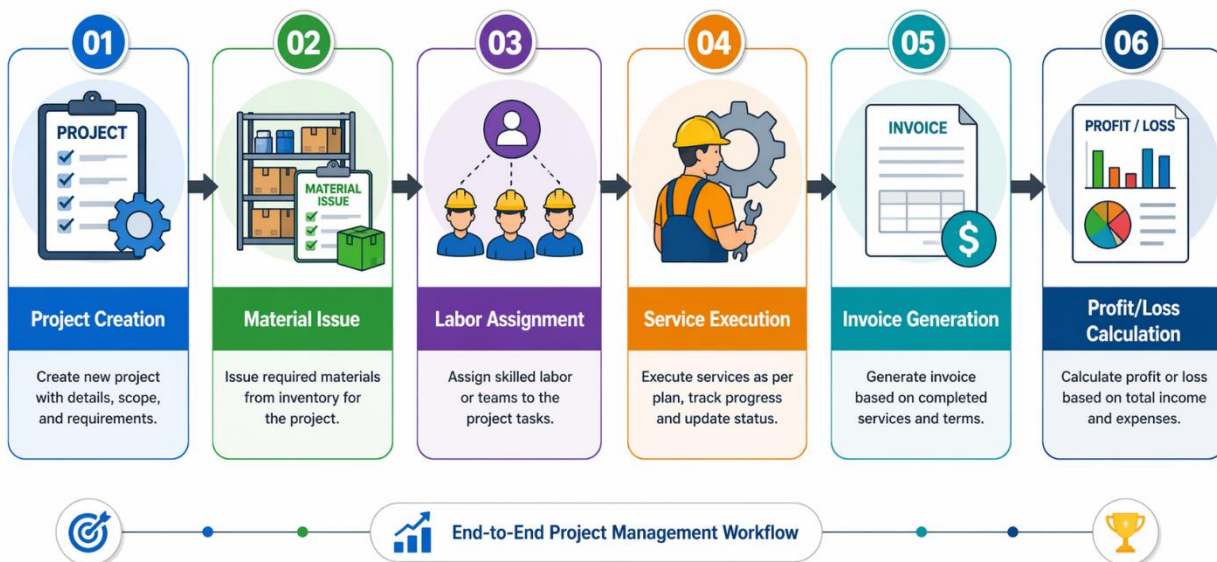

Every service operation must be treated as an independent project.

### 7.2 Cost Components

System must track:

- Material cost (from inventory)
- Labor cost (from HR)
- Logistics cost
- Import cost allocation

### 7.3 Project Flow

## 8. ACCOUNTING MODULE

### 8.1 Core Components

#### Assets

- Fixed Assets (machinery, equipment, building)
- Current Assets (inventory, cash, receivables)

#### Liabilities

- Accounts Payable (supplier dues)
- Rent
- Insurance
- Bank interest
- Salary payable

#### Income

- Product sales revenue
- Service revenue

## Receivables

- Customer outstanding payments

## 8.2 Key Requirement

All transactions across modules must automatically post to the accounting system.

## 9. HR & PAYROLL MODULE

### 9.1 Features

#### Employee Management

- Employee profiles
- Department and role assignment

#### Attendance & Leave

- Daily attendance tracking
- Leave management system

#### Payroll

- Salary calculation
- Payment processing

#### Performance Tracking

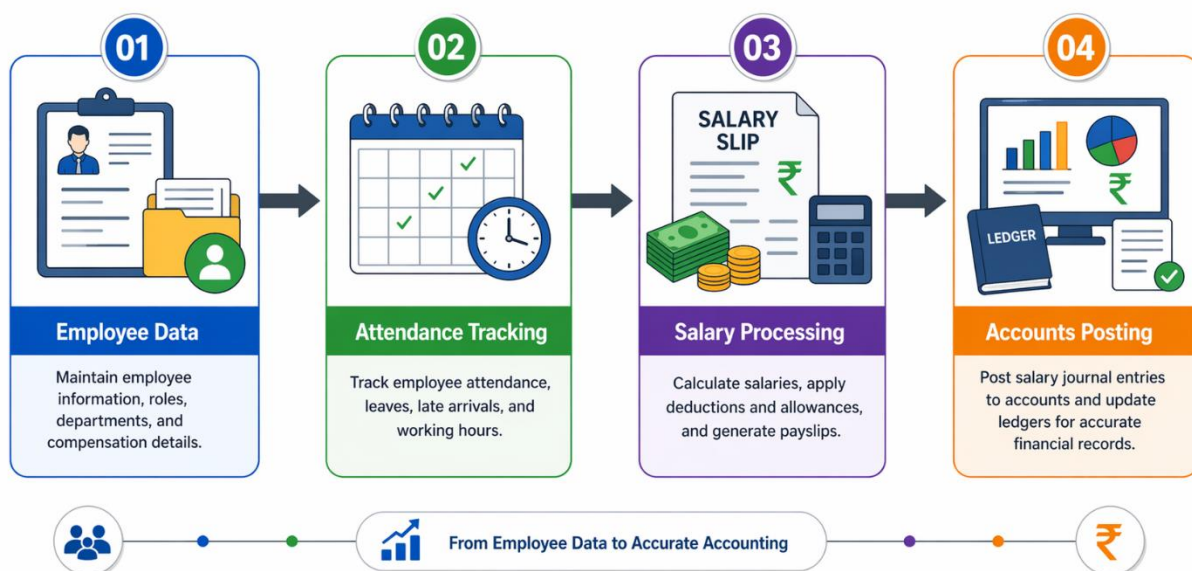

- Employee evaluation

### 9.2 Special Rule

- Overtime (OT) must be:
  - Calculated separately
  - Stored under a separate ledger
  - Not included in base salary

### 9.3 HR Workflow

Employee Data → Attendance Tracking → Salary Processing → Accounts Posting

## 10. USER MANAGEMENT & SECURITY

- Role-based access control (RBAC)
- Organizational hierarchy
- Module-wise permissions
- OTP / Two-factor authentication
- Activity logs and audit trails

## 11. REPORTING & DASHBOARD

**System must generate:**

- Inventory reports (stock, movement, aging)
- Sales reports (retail, corporate, service)
- Demand vs supply analysis
- Project profitability reports
- Import cost analysis
- Financial statements
- HR reports

## 12. SYSTEM INTEGRATION SUMMARY

| Module      | Integrated With             |
|-------------|-----------------------------|
| Inventory   | Accounts, Sales, Commercial |
| Commercial  | Accounts, Inventory         |
| Sales & CRM | Accounts, Inventory, HR     |
| HR          | Accounts                    |
| Accounts    | All Modules                 |

### 13. FINAL SYSTEM FLOW (SIMPLIFIED)

Customer Query → Task → Project → Execution →  
Inventory/Labor Usage → Invoice → Payment → Accounts → Reporting

### FINAL SYSTEM FLOW (SIMPLIFIED)

### 14. ADDITIONAL ENHANCEMENTS (RECOMMENDED)

- Mobile Application (attendance, field service)
- Document Management System (DMS)
- Real-time notifications (SMS/Email)
- QR-based tracking (inventory/service)
